

Drupal Development Workflow

Presented by Mark Shropshire, IT Director
Student Union, Activities and Recreation IT
The University of North Carolina at Charlotte

The Components

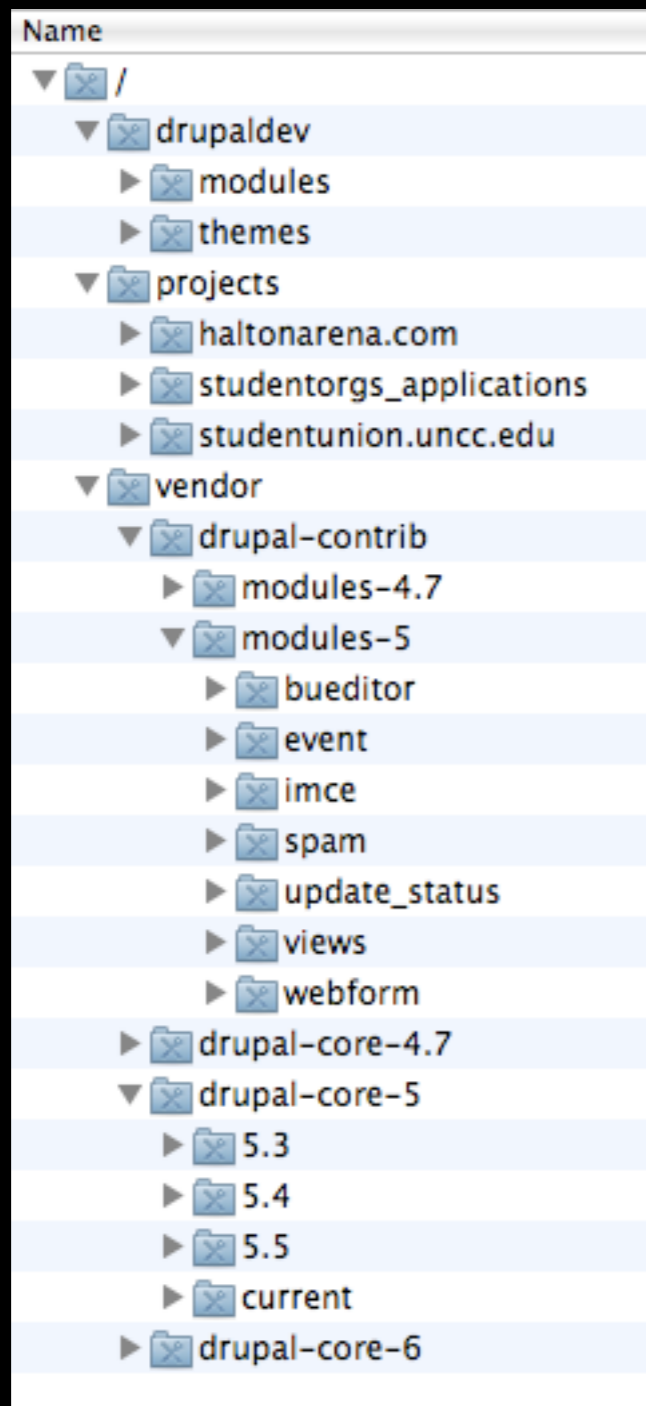

Subversion

- Used to for revision control of code and supporting project files
- Used to maintain vendor source for easy upgrades
- Leverage Drupal multisites for automatic configuration between local dev, test and prod web servers

Subversion Layout

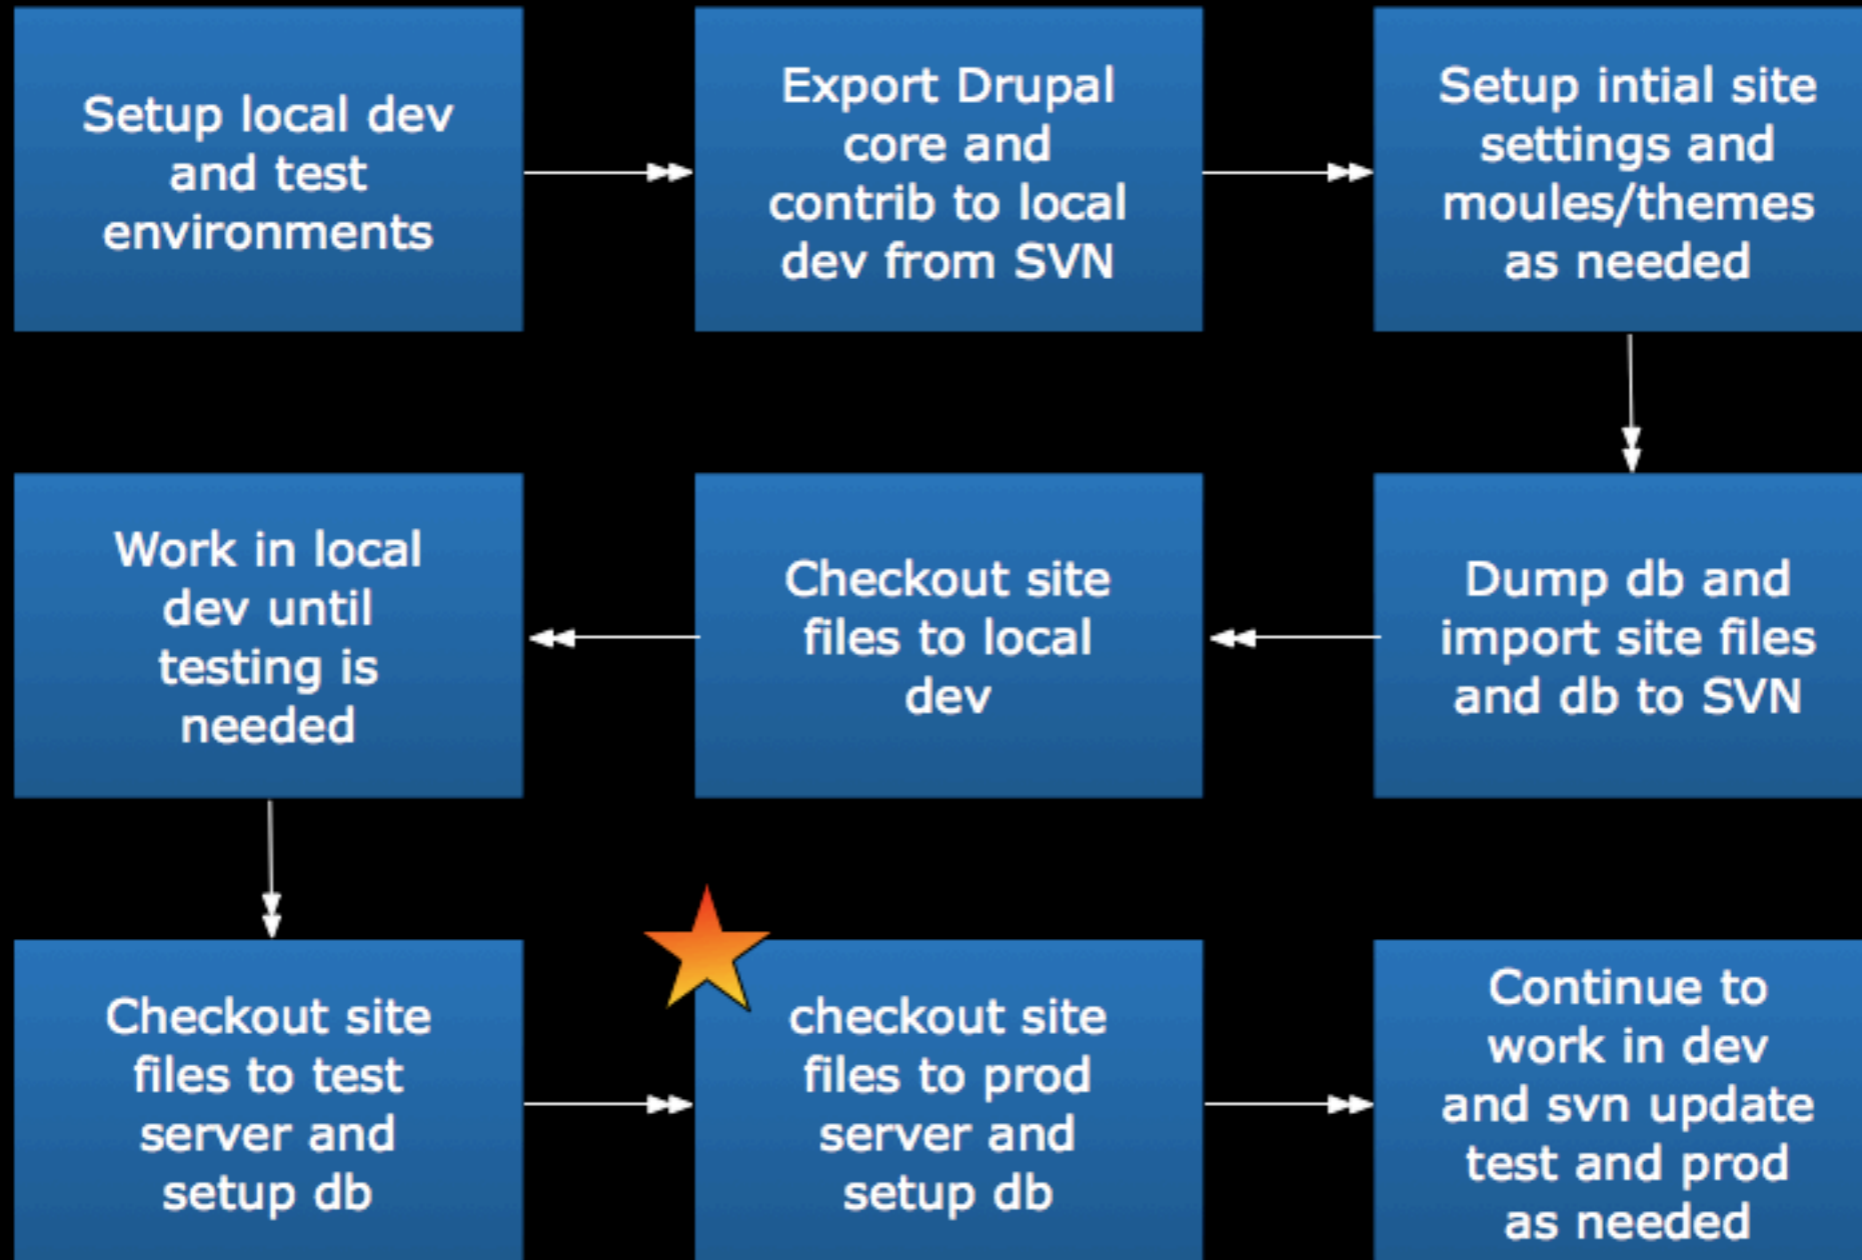

Drupal Dev

Projects

Vendor Drops

Workflow

Tools (Mac OSX)

- MAMP
- NaviCat
- Textmate
- ZigVersion
- Subversion client and server
- `svn_load_dirs.pl`
- Drupal Multisite

Todos

- Deal with site settings that are stored in the database (ex: cck, views, etc.)
- Script the copy of current prod db to local dev instance
- Script/automate db moves between local dev, test and prod servers
- Script/automate move of files folder

Q&A
